                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                           The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotractic/chemokinetic activity, haemostatic and thrombolytic activity, chemotractic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and Nater The Course of the content of the content activity atthricts and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                21-JAN-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to human nucleic acids (AAI57798-AAI61369) and CC the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide cytem in the invention may be used to treat diseases of the peripheral nervous cytem diseases, such as peripheral nervous injuries, peripheral neuropathy and Colocalised neuropathies and central nervous system diseases, such as Alzheimer's, Farkinson's disease, Huntington's disease, amyotrophic cyterial sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolytic activity, chemotactic/chemokinetic activity.

CC Activin/inhibin activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and CC c.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel genes (ABA07454-ABA08224) and proteins (ABB10743-ABB10980) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Rosen CA,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to novel genes (ABA07454-ABA08224) and proteins (ABB10743-ABB10980) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's clists; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological disease e.g. cerebral anoxia and ceplleps; and (f) infectious diseases such as viral, bacterial, fungal more aparasitic infections, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 2898 BP; 796 A; 744 C; 600 G; 758 T; 0 other;

                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIGIT6-ABL30511), expressed DNA sequences (ABLIGIT6) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                     (ABB57737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The invention i useful in developmental biology and in elucidating cell signaling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB70773)-ABB72072).

CABB57737-ABB72072).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG01840-ABLG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 1; SEQ ID NO 13466; 21pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     23-MAR-2000; 2000US-191637P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a method for diagnosing a disorder characterised by expression of a human cancer associated antigen (CAA) precursor (I) coded by a NA Group I nucleic acid molecule (NI) comprising contacting the biological sample with an agent (A) that specifically binds to NI, (I) or its fragment, complexed with an human leukocyte antigen (HLA) molecule and determining the interaction between the agent and NI or (I). (I) has cytostatic activity and can be used in gene therapy and vaccine production. The method can be used for treating a subject with a condition characterised by expression of (I) in cells of a subject. The present sequence which is used in the exemplification of the production of the present sequence which is used in the exemplification of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to novel kidney related polynucleotides

(AA162971-AA163793) and the encoded polypeptides (AAM42417-AAM42691)

(C) collectively known as kidney antigens and the use of such kidney antigens

(C) detecting disorders of the kidney, especially kidney cancer and

(C) kidney cancer metastases. The polynucleotides and proteins are also

(C) useful for preventing, treating or ameliorating medical conditions

(C) useful for preventing, treating or ameliorating medical conditions

(C) treatment and prevention of the specification. The nucleic acids,

(C) treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer,

(C) and other cancers of the adrenal gland, bone, bone marrow, breast,

(C) gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders

(c) e.g. Addison's disease, allergies, autoimmune haemolytic anaemia,

(C) cutoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple

(C) cardiovascular disorders such as mycoardial ischaemias; (d) wound

(d) healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy;

(d) cardiovascular disorders such as viral, bacterial, fungal and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 describes (1) recombinant expression vectors containing (1); (2) prokaryotic and eukaryotic cells transformed or transfected with (1) or the vector of (1); (3) production of nodulation factors by culturing cells of (2); (4) (partial) expression products (II) of (I), and synthetic proteins or peptides with the same sequences; (5) monoclonal or polyclonal antibodies (Ab) specific for (II); (6) hybridoma cells that produce monoclonal Ab; and (7) transgenic plants that contain cells of (2). (I), and their fragments, are useful for expression of recombinant nodulation factors, are useful as probes and primers for detection, isolation and amplification of full-length cDNA sequences and are used to produce transgenic plants. Cells transformed with (I), and recombinant nodulation factors or synthetic peptides or proteins with the same activities, are used to promote growth, development and yield of plants, particularly transformed with (I) and recombinant activities, are used to promote growth, development and yield of plants, as the product of plants activities are used to promote growth, development and yield of plants.

The nodulation factors encoded by (I) promote root formation in plants and improve yield, particularly when grown on soil contaminated with xenobiotics injurious to plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes novel DNA sequences (I) that express products having the biological function of nodulation factors.                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                             including: arteriosclerosis, cirrhosis, hepatitis, cancers, AIDS, allergies, anaemia, asthma, autoimmune thyroiditis, bronchitis, atopic dermatitis, diabetes mellitus, emphysema, Goodpasture's syndrome, gout, Grave's disease, multiple sclerosis, osteoarthritis, pancreatitis, psoriasis, rheumatoid arthritis, systemic lupus erythematosus, ulcerative colitis, uveitis, Alzheimer's disease, Huntington's disease, Parkinson's disease, stroke, and viral, bacterial, fungal and protozoal infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is the coding sequence for a human transcription factor. The transcription factor and its coding sequence are useful in the diagnosis, treatment and prevention of diseases associated with altered expression of the transcription factor e.g. cell proliferative, autoimmune/inflammatory, neurological and developmental disorders. A number of specific disorders/diseases are given in the specification, including associated with the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel transcription factor polypeptides, used to treat diseases associated with altered activity and expression of TRFX, and to for agents capable of modulating its activity - {\sf TRFX}

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
